MIDAS multiport valve

Multiport control valve for filters and softeners.

Overview

A multiport valve puts all the flow paths of a filter or softener in one body: service, backwash, rinse, brine and fast rinse. One handle or one automatic head sets the mode, so operating the vessel is simple and error-free.

Key features

- All operating modes in one valve body
- Manual and automatic versions
- Fits FRP vessel top openings
- Fewer pipes and fewer valves to operate
- Spares and service support

Typical applications

- Sand and carbon filters
- Water softeners
- Small DM units
- Iron removal filters

Typical specifications

Modes	Service, backwash, rinse, brine/regeneration, fast rinse
Operation	Manual handle or automatic head
Fit	Top-mounted on FRP vessels
Use	Sand, carbon and softener vessels

Values are typical, for reference. The final specification is confirmed in our quotation, against your flow, pressure and water analysis.
